

## **Triumfant Offers Special Fiscal Year-End Pricing On FDCC Compliance and Green IT Power Management Solutions**

*Combined Solutions Reduce Costs and Speed Move to Compliance for Federal Agencies*

**Rockville, MD – August 5, 2009** – [Triumfant](#)®, creator of patent-pending software that automatically discovers, analyzes and remediates unexpected changes and conditions at the endpoint, announced today that it is offering special fiscal year-end pricing on its Federal Desktop Core Configuration (FDCC) Compliance and Green IT Power Management solutions.

Through September 30, 2009, federal agencies can purchase annual licenses for Triumfant's FDCC Compliance solution for \$5 per endpoint computer, representing a significant discount to Triumfant's list price. Triumfant is completing its second year of National Institute of Standards and Technology (NIST) Security Content Automation Protocol (SCAP) validation for performing the scanning and remediation processes for federal agencies to achieve and maintain compliance with the FDCC. In addition, this solution comes with a complete set of FDCC compliant policies. Triumfant is one of a very few FDCC validated tools certified for Misconfiguration Remediation. Unlike other tools that use pre-written scripts or require either the agency or the vendor to write a script for remediation, Triumfant is the only solution that synthesizes a situational remediation for each detected misconfiguration, ensuring daily compliance on every machine without the need for human interaction.

Triumfant is further extending the value to federal agencies by bundling Triumfant's Green IT Power Management solution with the FDCC Compliance solution for an additional \$2 per machine. This deal is also available through September 30, 2009. This solution reduces computer power consumption without impacting computer use or maintenance and administration. Based on an organization's energy management policies, the Green IT Power Management solution automatically detects when a PC is out of compliance and automatically corrects power configuration settings, ensuring that power policies are enforced on every machine, every day. The result is savings that range from \$20 to \$40 per machine per year, creating a rapid return on investment. The Triumfant solution is highly customizable and its extensive reporting provides actionable information allowing agencies to adjust their power management policies in order to conserve energy and lower costs. Agencies also have the option of purchasing the Green IT Power Management solution as a standalone offering for \$3 per endpoint machine.

Triumfant utilizes an extremely thin and non-obtrusive agent footprint as compared to other FDCC compliance and power management solutions that must download policies and pre-written remediations to the agent and continuously update both. The solutions share the same Triumfant Resolution Manager architecture so there is no additional software to install to use both solutions, and everything is administered under one console. Combining the two solutions means that the money saved by implementing power management will pay for both solutions in less than six months - using even the most conservative estimates.

“At Triumfant, we believe that the government does not need to spend a lot of money in order to acquire effective tools to demonstrate and maintain compliance with government mandates,” stated Jim Ivers, Chief Marketing Officer at Triumfant. “By utilizing one product to deliver different capabilities, such as power management and automatic remediation, Triumfant allows agencies to lower their total cost of ownership while at the same time work more efficiently to meet organizational goals.”
